

Date: ___/___/___
-Net Core
asp entity framework

One sol has multiple projects
and One project has multiple
namespaces and one namespace
has multiple classes
Classes are

Yes

Public

Private → Class cannot be private

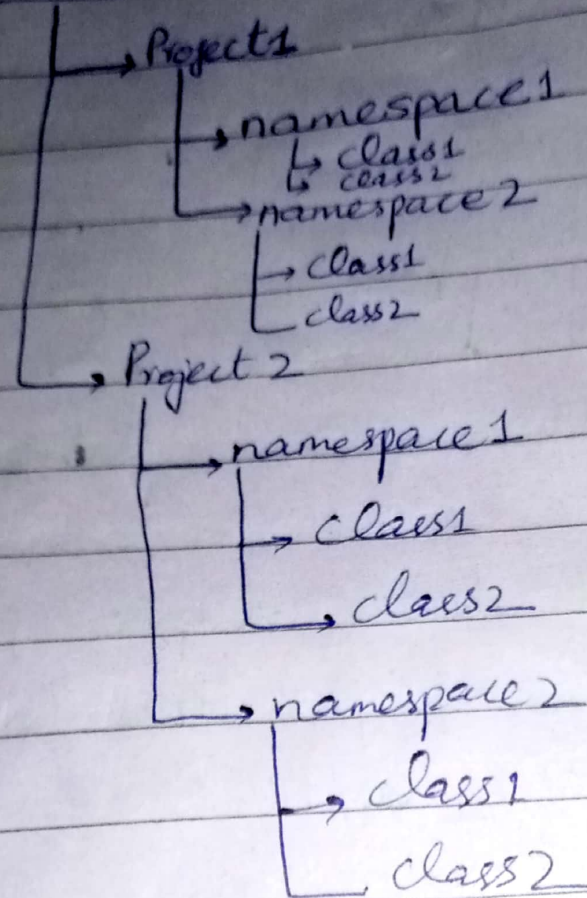

Internal →

→ internal classes sirf apni project
mein accessible hain.

Desktop + Website

WPF

Solution

Internal class same project
mein different namespaces k liye
accessible hoti he. (using namespace)

30-01-25

N-tier Architecture (Near

- Presentation
 - Business Logic
 - Data Access
 - Business object
 - Project Control
- Logic k liye
getter, setter bandy
hain

ADO.net.

→ CRUD operation

→ SQL injection → solution parameterized query

- Project → R.C → Manage Nuget Packages

MS.data.SqlClient

Connection String

Select → execute - reader → SqlDataReader

Other → executeNonQuery

String ? mystr = null;

'OR 1=1--

→ Parameterized Queries

placeholder → @

cmd.parameter.add(p1);

cmd.parameter.Add(p2);

```

using (SqlConnection con = new SqlConnection()) {
    con.Open();
}
  
```

this use for

class Car implements IDisposable {
 public void Dispose() {
 throw
 }
}

→ paly sy likha code jo

DB class

class netportal {

List<users> user

users class ki
→ list or name
user.

→ aik db name ki class or baqi

jitni

Se21 db = new Se21();

var lst = db.Users.ToList(); → agar name

Select List<Users> mylist = db.Users.ToList(); → data return type

foreach (Users U in mylist) {

Users temp = new Users (name, p-?);

Add insert { db.Users.Add(temp);

db.SaveChanges();

delete

delete { var Obj = db.Users.FirstOrDefault (X => X.Username =
 db.Users.Remove(Obj);

db.SaveChanges

KeepSmiles

panels

Date: 17/02/2025

Grid dock stack wrap
↳ Stackpanels

→ dock panel sub sy brua ho
→ dock k under multiple panels use
↳ by default left dock

→ Entity Framework tools and design.
→ ms.entityframework.sqlserver.

Update:

```
Uetuser obj = db.uetusers.FirstOrDefault(x => x.userName == ana);  
obj.Password = "123";  
db.SaveChanges();
```

DataBinding

```
Text = { Binding ElementName = "source",  
Path = "Text", Mode = "OneWay" }
```

OneWay → source to destination;

TwoWay → Source to destination Or Vice versa

UpdateSourceTrigger = PropertyChanged

OneWayToSource → destination to source.

Ischecked = { Binding ElementName = T4, Mode
OneWay, Converter = { StaticResource, MyConverter }
path = 'Text')
